### 1. Purpose

This Standard Operating Procedure (SOP) provides guidance to all researchers for the assessment of risks to an individual study, research participants, researchers and the University.

### 2. Introduction

The International Conference on Harmonisation Good Clinical Practice guidance requires that "before a trial is initiated, foreseeable risks and inconveniences should be weighed against the anticipated benefit for the individual trial subject and society. A trial should be initiated and continued only if the anticipated benefits justify the risks".

The risk in Clinical Trials can be defined as the likelihood of a potential hazard occurring and resulting in harm to the participant and/or an organisation, or to the reliability of the results. It is necessary that the University, when involved in a clinical trial must consider its specific responsibilities/duties with respect to the trial and the level of risk in relation to these.

However, for every trial there is a core set of risks inherent with an individual clinical trial and these risks can be considered with regard to the:

- Research to be undertaken e.g.:
  - (i) Lack of experience resulting in poor quality research;
  - (ii) Lack of attention to detail to determine feasibility of study;
  - (iii) Non-completion of research;
  - (iv) Failure to comply with research protocol.
- University and other institutions involved in the research e.g.:
  - (i) Reputation;
  - (ii) Financial;
  - (iii) Failure to comply with the relevant legal and governance frameworks.
- Participants both research subjects and the researchers e.g.:
  - (i) Recruitment without informed consent;
  - (ii) Not respecting participants requests during research;
  - (iii) Hazard of any proposed interventional technique to research subject;
  - (iv) Health and safety hazards to researcher e.g. Human tissue, biological material, lone field workers, CoSHH.
- Completing the research study e.g.:
  - (i) Lack of project management to complete on time and within budget;
  - (ii) Inadequate recruitment.
- Dissemination of research findings e.g.:
  - (i) Failure to publish.

The personal safety of the research participant and other risks related to the design and methodology of the clinical trial, in particular, participant safety, participant's rights and reliability of results remain paramount. During development of the research protocol these risks should be assessed and plans to mitigate against the risk included in the protocol.

Identifying risks at an early point in the research management process allows for necessary remedial actions to be costed as part of the grant application.

#### **Definitions**

Hazard: Anything that could cause harm.

Risk: Probability or likelihood that harm will be caused by the Hazard.

| Likelihood: | Low<br>Medium<br>High<br>Very high | Unlikely to occur but not impossible.<br>Less likely than not to occur.<br>More likely to occur than not to occur.<br>Very likely though not certain to occur. |
|-------------|------------------------------------|--|
| Impact:     | Minor<br>Moderate<br>Significant   | Unexpected complications and full recovery made.<br>Some permanent loss of function or loss of earnings to<br>research participant.<br>Death or disability.    |

#### 3. Scope

This SOP applies to all members of University staff; both academic and support staff as defined by Statute 1 and including honorary staff and students who are conducting research within or on behalf of the University.

### 4. Responsibilities

### 4.1 Chief Investigator

It is the responsibility of the Chief Investigator (CI) to protect the safety and well-being of the research participants, the researchers involved and protect the integrity of the study. The CI, or the appropriate designated person, should identify the potential hazardous aspects of the research and ensure that these are assessed and appropriately managed. Where necessary the CI should involve the expertise of staff involved in managing risk within the University and, if appropriate, the Trust.

The risk assessment matters relating to participant safety and study integrity should be incorporated into the research protocol

Other risks, examples of which are described in 5.1.1 below, should be considered and a separate risk assessment completed in conjunction with the Research Governance Team. The CI is responsible for ensuring that all those involved in the study are aware of the risks and how these are to be managed. Copies of all risk assessments must be retained as part of the Trial Master File.

### 5. Procedure

### 5.1 Identify the hazard

In order to assess the potential risks, you must first identify the hazards. These can be potential hazards to the research study, the research participants, and the organisation(s) involved. For each study the potential hazards faced by the researcher, the research participants, and the organisation(s) involved should be identified and the level of risk of harm assessed.

In the tables below are the potential hazards for a research study, as taken from the Clinical Trials Toolkit "notes on Good Practice for Research Organisations in the Management of a Portfolio of Trials 2: Assessment of Risk". This is not a comprehensive list.

It is recommended that each of these hazards is considered in addition to others identified by the CI and the research team. Where either the likelihood of the risk occurring is medium or above, or the impact moderate or significant the University's risk assessment form, attached as Appendix 1, should be completed.

| Generic        | Examples/Points for                  | Management Strategies            |
|----------------|--------------------------------------|----------------------------------|
| Hazard         | consideration                        |                                  |
| Organisational | Multi-centre studies                 | Trial Management Protocol        |
| complexity     | Multi-disciplinary studies           | Trial Steering Committee         |
|                | Complex series of events /           | Trial Co-ordinator posts         |
|                | stringent timings required           | Multi-disciplinary project teams |
|                | Non-standardised methods             | Standardised data collection     |
|                | Complex data collection              | forms, electronic processing,    |
|                | requirements                         | back-ups                         |
|                | Poor data quality and integrity      | Regular data quality checks      |
|                |                                      | Audit-source data verification   |
| Study power    | Plausibility of treatment effect     | Statistical input to design and  |
|                | Patient numbers                      | power                            |
|                |                                      |                                  |
| Recruitment    | Poor fit with clinical pathway       | Multidisciplinary project teams  |
|                | Insufficient patient pool            | Input from service               |
|                | Unduly restrictive/prescriptive      | Realistic recruitment schedules  |
|                | eligibility criteria                 | Pilot studies                    |
|                | Restricted access to patients        | Adequate resources               |
|                | Large referral base                  | External communication and trial |
|                | Competing trials                     | promotion                        |
|                | Patient health/compliance/ability to |                                  |
|                | travel                               |                                  |
|                | Patient travel costs                 |                                  |
|                | Patient preferences                  |                                  |
|                | Length and frequency of follow-up    |                                  |
|                | Ineffective communication with       |                                  |
|                | patient (before and after study)     |                                  |

### Table 5.1.1: Hazards to the Research Study

| Generic<br>Hazard | Examples/Points for<br>consideration   | Management Strategies       |
|-------------------|--|-----------------------------|
| Consent           | Failure to record consent              | Training in consent process |
| Data              | Incomplete and/or inaccurate           | Staff training              |
|                   | Non-adherence to protocol              | Key data items              |
|                   |  | Collection methods          |
| Study Results     | Violation of inclusion/exclusion       | Trial Management Protocol   |
|                   | criteria                               | Independent randomisation   |
|                   | Financial / non-financial incentives   |                             |
|                   | Randomisation procedure                | Statistical input to data   |
|                   | Blinding / anonymisation               | Monitoring and audit        |
|                   | arrangements                           | Interim reports             |
|                   | Source data availability for           | Literature updates          |
|                   | verification                           | Annual progress report      |
|                   | Results not disseminated / implemented |                             |
| Staff             | Standardisation of methods             | Training                    |
| competence        | Quality of data collection             | Appropriate level of        |
| and               | Communication with research            | resources                   |
| experience        | subject                                | Project team meetings       |
|                   | Administrative support                 | Research Manager support    |
|                   | Staff recruitment                      | Job descriptions            |

| Generic<br>Hazard                     | Examples/Points for<br>consideration   | Management Strategies   |
|---------------------------------------|--|---|
| Novel or<br>unproven<br>interventions | Novel drugs, devices, surgical<br>procedures, potential for<br>unexpected adverse events<br>Unproven effectiveness<br>Use for new indication<br>Increased susceptibility of patient<br>population<br>Novel handling requirements e.g.<br>drugs, tissue<br>Equipment safety | Regulatory (MHRA) and<br>ethical (REC) approvals<br>Data Monitoring and Ethics<br>Committee<br>Adverse event reporting<br>systems<br>Quality control checks on<br>equipment |
| Inexperienced clinical team           | New clinicians<br>Unfamiliar with underlying condition<br>Unfamiliar with expected adverse<br>events   | Project team with<br>experienced support<br>Training  |
| Assessment<br>methods                 | Increased radiological exposure<br>Additional invasive tests (e.g.<br>venipuncture, endoscopy,<br>amniocentises, catheterisation)  | IRMER / ARSAC<br>Data Monitoring and Ethics<br>Committee<br>Adverse event reporting<br>systems  |

### Table 5.1.2 Hazards to the Research Participant

| Generic<br>Hazard                               | Examples/Points for<br>consideration  | Management Strategies   |
|---|---|---|
| Consent –<br>uniformed,<br>absent,<br>pressured | Time to consider<br>Information provided –clarity,<br>appropriate, language<br>Experience and knowledge of<br>person taking consent<br>Timing relative to diagnosis<br>Capacity to give consent<br>Participation in multiple trials<br>Failure to act on withdrawal of<br>consent<br>Consent not recorded and/or filed<br>Incorrect use or storage of tissue<br>samples | REC approval for information<br>and process<br>Training and awareness<br>Panel of people equipped to<br>act as legal representative<br>Communication systems e.g.<br>alert stickers in patient notes,<br>contact details<br>Human Tissue database<br>Audit of consent procedures<br>including verification of<br>signed consent forms |
| Protecting<br>privacy of<br>participant         | Anonymisation<br>Data protection requirements and<br>security of systems<br>Breach of confidentiality   | Local Standard Operating<br>Procedures: Passwords /<br>encryption policies<br>Training  |

## Table 5.1.3 Hazards to the University

| Generic<br>Hazard | Examples/Points for<br>consideration   | Management Strategies   |
|-------------------|--|---|
| Liability         | Breach of primary contract / sub-<br>contracts<br>Legal obligations under:<br>UK Clinical Trials Regulations | Input from Research Support<br>Office / Knowledge<br>Exploitation Unit<br>Monitoring of collaborating |

|  | Human Tissue Act<br>Clarity of liability information in<br>patient information sheet e.g.<br>arrangements for non-negligent<br>harm.  | sites<br>Systems in placed and<br>followed for reporting<br>obligations for medicinal trials<br>Archive/Storage/Consent for<br>human tissue samples<br>Clear identification of<br>research governance<br>sponsor |
|--|---|--|
| Intellectual property                      | Overlooked opportunities<br>Lost opportunity due to disclosure  | Knowledge Exploitation Unit  |
| Duty of Care<br>under health<br>and safety | Use of potentially dangerous<br>harmful equipment<br>Use of potentially dangerous /<br>harmful substances/organisms<br>Lone Workers<br>Long periods working with<br>computers | Relevant health and safety<br>risk assessments<br>Health and Safety Policy<br>Training   |
| Fraud                                      | Incentives – financial and non-<br>financial<br>Consequences to the research  | Financial management systems   |
| Reputation                                 | Hazard resulting in serious harm<br>and/or death of research<br>participant/researcher  | Systems and procedures<br>Risk assessment process  |

### 5.2 Identify who can be harmed and how

Each hazard should be considered in terms of who can be harmed e.g. the researcher, the research participant, the University and how this might happen. For example, a researcher working alone interviewing participants in their own home, a participant wrongly recruited to a trial, or the University's reputation is damaged through poor compliance with legislation.

### 5.3 Evaluate Risks

In keeping with Good Clinical Practice (GCP) guidance it is necessary to weigh the perceived risks against the anticipated benefit for the individual research participant and society as a whole. It is through this evaluative process that the CI determines whether the anticipated benefits justify the risks. In addition, it is necessary to determine what procedures and precautions are required in order to minimise the risk within a study. For example, ensuring that researchers are adequately trained, a lone worker SOP is prepared and invoked, equipment appropriately maintained, or sufficient time is allocated to complete the research etc.

### 5.4 Record findings

It is necessary to ensure that all staff involved in the research study are aware of the potential risks faced and how these can be minimised. In order to assist with the communication of these risks, findings should be recorded on the risk assessment form and discussed with the research team. A record of the risk assessment and discussions should be retained in the Trial Master File in order that the risks can be reviewed and updated accordingly, as necessary.

For University sponsored research recorded as risk category level 4 copies of initial and review risk assessments should be forwarded to the Research Governance Team. The risk assessment of CT-IMPs will be undertaken in conjunction with the relevant member of the Research Governance Team. These risk assessments will inform the monitoring arrangements for individual research studies.

### 5.5 Regular Review

Risk Assessments should be reviewed annually, or whenever there is a change in legislation or information that may impact on your research study. Any amendments/updates should be recorded and shared with members of the research team. A copy of the new risk assessment should be filed in the Trial Master File, along with the previous version(s). Where applicable (as outlined in 5.4) a copy of the review should also be forwarded to the Research Governance Team
