<sup>1</sup> Representativeness ratio = 1 if the proportion in the population is the same as the proportion in the NILS. If the ratio is greater than 1 then the proportion in the NILS is higher than the proportion in the population. If the ratio is lower than 1 then the proportion in the population is higher than the proportion in the NILS

### Cars per household (2001 to 2011) for those alive at both 2001 and 2011

The following table shows the transitions of Cars per household for NILS members live at both the 2001 and 2011 censuses.

		2011 Census Information					
		All NILS Members	No cars or vans	One car or van	Two cars or vans	Three cars or vans	Four or more cars or vans
2001 Census Information	All NILS Members	365,957	52,229	128,647	126,091	39,334	19,656
	No cars or vans	54,543	32,304	16,463	4,782	759	235
	One car or van	154,694	15,920	78,411	45,133	11,047	4,183
	Two cars or vans	122,442	3,327	26,788	61,339	20,707	10,281
	Three cars or vans	25,018	514	5,342	11,038	4,918	3,206
	Four or more cars or vans	9,260	164	1,643	3,799	1,903	1,751

### Cars per household in the 2011 Census Quality Survey

The Census Quality Survey (CQS) was an independent voluntary survey targeted at a random sample of households that had responded to the Census to assess the level of quality of census responses. The actual responses reported in the Census regarding number of cars or vans aligned with that reported in the CQS in 87.2 of cases. More detail is available at [http://www.nisra.gov.uk/archive/census/2011/census\\_quality\\_survey.pdf](http://www.nisra.gov.uk/archive/census/2011/census_quality_survey.pdf)

### Discussion

The 2001 and 2011 cars per household is representative of the overall population as published by Census Office for the largest group "One car or van" per household.

The number of NILS households in 2001 and 2011 with no cars or vans per household is under-represented, which in turn has resulted in those NILS households with two or more cars or vans being over-represented. One potential explanation for this is that larger households are more likely to have more cars and also have a higher probability of having a resident or multiple residents who are NILS members.

Of the NILS members who reported having no cars or vans per household in 2001, 41% reported having one or more cars or vans a decade later. Of those who reported having one car or van in 2001, subsequently reported having two cars or vans a decade later.

Of the NILS members who reported having one or more cars per household in 2001, 6% reported having no car a decade later.

Of the NIS members who reported having four or more cars or vans per household in 2001, 19% reported that they still have the same number of cars or vans a decade later.
