

Statistical release pre-release recipients

A key objective of the official statistics code of practice is to help ensure that statistical reports are released into the public domain in an orderly manner that promotes public confidence and gives equal access to all, subject to any relevant legislation. An important part of this is to indicate clearly the individuals who have access to the information prior to release. The following individuals will receive access to Northern Ireland Cancer registry statistical release 'Cancer Statistics By Local Government District: Patients diagnosed in Northern Ireland during 2008-2012' 24 hours in advance of publication:

Consultant in Public Health, Cancer Services, Public Health Agency
