Summary	3
Patients with pathology samples indicating cancer - All persons	7
Patients with pathology samples indicating cancer - Males	9
Patients with pathology samples indicating cancer - Females	11
Patients with pathology samples indicating cancer - Ages 0-69	13
Patients with pathology samples indicating cancer - Ages 70 and over	15
Patients with pathology samples indicating cancer - Belfast	17
Patients with pathology samples indicating cancer - Altnagelvin	19
Patients with pathology samples indicating cancer - Antrim	21
Patients with pathology samples indicating cancer - Craigavon	23
Patients with pathology samples indicating bowel cancer - All persons	25
Patients with pathology samples indicating bowel cancer - All persons, screening age	27
Patients with pathology samples indicating lung cancer - All persons	29
Patients with pathology samples indicating breast cancer - Females	31
Patients with pathology samples indicating breast cancer - Females, screening age	33
Patients with pathology samples indicating prostate cancer - Males	35
Patients with pathology samples indicating gynaecological cancer - Females	37
Patients with pathology samples indicating upper gastrointestinal cancer - All persons	39
Patients with pathology samples indicating head & neck cancer - All persons	41
Patients with pathology samples indicating urinary cancer - All persons	43
Patients with pathology samples indicating haematological cancer - All persons	45
Patients with pathology samples indicating malignant melanoma - All persons	47
Patients with pathology samples indicating non-melanoma skin cancer - All persons	49
Patients with pathology samples indicating other cancer - All persons	51
Notes	53

SUMMARY

Recent trends in the number of patients with pathology samples indicating cancer: Oct 2020

- 1) This summary provides an overview of recent trends in the number of patients with pathology samples indicating cancer (excluding non-melanoma skin cancer, NMSC) whose first sample was taken from 1st January 2020 to the week ending 10th October 2020 in Northern Ireland.
- 2) These trends are contrasted with the annual average number of patients with pathology samples indicating cancer (ex NMSC) during 2017-2019 in order to provide an indication of the potential impact of the Covid-19 restrictions on diagnostic cancer services.
- 3) Data are sourced from the four NHS pathology laboratories in Northern Ireland (Belfast, Altnagelvin, Antrim, Craigavon), which are usually provided to the NI Cancer Registry on a monthly basis.

Trends in patients with pathology samples indicating cancer by week first sample taken

- 4) From 1st March to 10th October 2020, the number of patients with a pathological sample indicating cancer was 22% lower than the average number for the same time period in 2017-2019.
- 5) Based upon the monthly trend in patients with pathology samples indicating cancer, there was an estimated shortfall of 1,200 patients during March-September 2020 compared to the expected number. Some of these "missing" patients may have a clinical only diagnosis (e.g. as a result of an emergency hospital admission).

Percentage change from 2017-2019 to 2020 in the number of patients with pathology samples indicating cancer, first taken in weeks 37-41 of each year (6 September to 10 October in 2020)

6) Patient demographics

There was a 12% reduction in the number of patients with a pathology sample indicating cancer in weeks 37-41 of 2020, compared to the average value for weeks 37-41 in 2017-2019. In particular, there was a 14% decrease among males and a 10% decrease among females. A decrease of 15% occurred in the number of patients aged 0-69 years, while a decrease of 8% occurred in the number aged 70 and older. Reductions were greatest in Craigavon (25%) and Antrim (16%).

7) Cancer type

Compared to the annual average for weeks 37-41 in 2017-2019, the number of patients with a pathology sample indicating lung cancer in 2020 decreased by 30%, while those indicating prostate cancer decreased by 19%. However, the number of patients with pathology samples indicating bowel or breast cancer increased by 3% and 7% respectively, while the number of pathologically diagnosed haematological cancer patients increased by 15%.

Percentage change from 2017-2019 to 2020 in the number of patients with pathology samples indicating cancer, and estimates of the number of "missed" patients in 2020: Patient demographics

Patient demographics	Percentage change from 2017-2019 to 2020 in the number of patients with pathology samples indicating cancer		Estimated number of "missed" patients
	Weeks 37-41 (6 Sept to 10 Oct in 2020)	Weeks 10-41 (1 Mar to 10 Oct in 2020)	At the end of September 2020
All persons	-12%	-22%	1,200
<u>Gender</u>			
Males	-14%	-21%	560
Females	-10%	-22%	630
<u>Age</u>			
Ages 0-69	-15%	-22%	690
Ages 70+	-8%	-21%	500
<u>Pathology Lab</u>			
Belfast	-9%	-16%	450
Altnagelvin	-5%	-26%	260
Antrim	-16%	-23%	140
Craigavon	-25%	-34%	350

Notes:
 "Missed" patients may have a clinical only diagnosis (e.g. as a result of an emergency hospital admission).
 "Missed" patients were calculated based upon the difference between the actual and expected number of patients recorded. The latter is determined using the trend in patients diagnosed pathologically from Jan 2017 to Feb 2020, and thus includes any expected increases (or decreases) as a result in annual changes in the number of cases diagnosed (e.g. as a result of population growth and/or ageing).

Percentage change from 2017-2019 to 2020 in the number of patients with pathology samples indicating cancer, and estimates of the number of "missed" patients in 2020: Cancer type

Cancer type	Percentage change from 2017-2019 to 2020 in the number of patients with pathology samples indicating cancer		Estimated number of "missed" patients
	Weeks 37-41 (6 Sept to 10 Oct in 2020)	Weeks 10-41 (1 Mar to 10 Oct in 2020)	At the end of September 2020
All cancers (ex NMSC)	-12%	-22%	1,200
NMSC	-15%	-35%	1,270
Bowel	3%	-15%	110
Lung	-30%	-29%	120
Female breast	7%	-17%	150
Prostate	-19%	-23%	170
Gynaecological	-2%	-24%	100
Upper GI	-23%	-29%	70
Head & Neck	-27%	-24%	60
Urinary	3%	-14%	30
Haematological	15%	-5%	50
Melanoma	-37%	-27%	110
Other cancer	11%	0%	20
<u>Screening age</u>			
Bowel cancer (Ages 60-74)	-6%	-17%	80
Breast cancer (Ages 50-70)	19%	-15%	70

Notes:

NMSC: Non-melanoma skin cancer; GI: Gastrointestinal

"Missed" patients may have a clinical only diagnosis (e.g. as a result of an emergency hospital admission).

"Missed" patients were calculated based upon the difference between the actual and expected number of patients recorded. The latter is determined using the trend in patients diagnosed pathologically from Jan 2017 to Feb 2020, and thus includes any expected increases (or decreases) as a result in annual changes in the number of cases diagnosed (e.g. as a result of population growth and/or ageing).

Other cancers excludes cancer of unknown primary.

Patients with pathology samples indicating cancer (ex NMSC): All persons

Patients with pathology samples indicating cancer, with first sample taken from 1 Mar 2020 to 10 Oct 2020

Patients with pathology samples indicating cancer by month first sample taken

Patients with pathology samples indicating cancer by week first sample taken

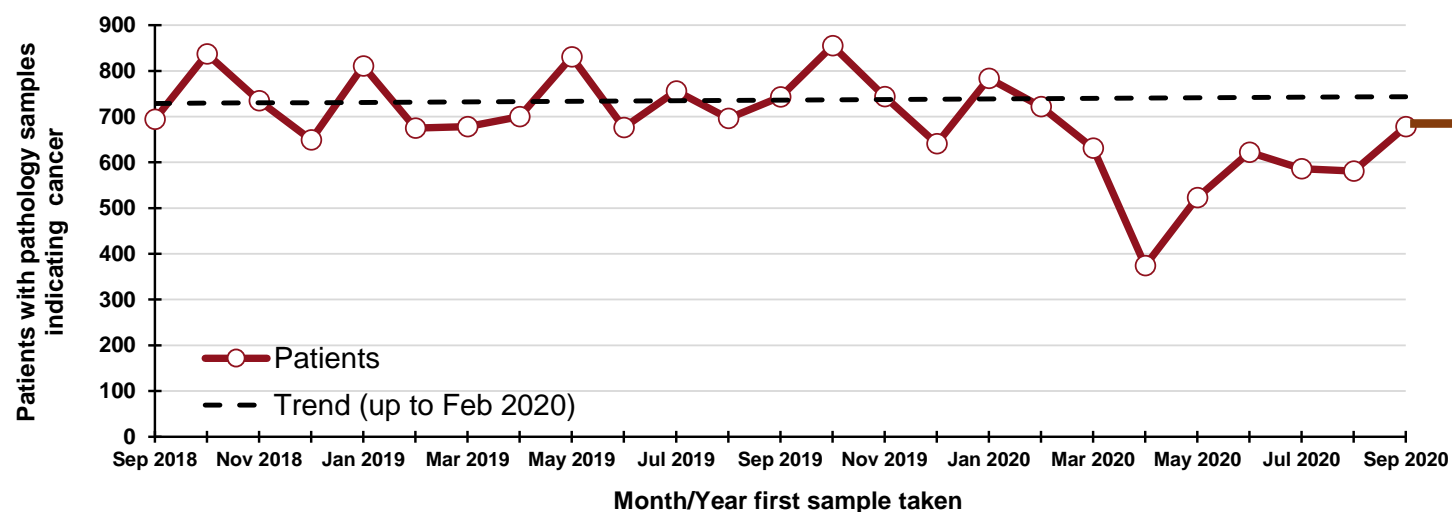

Percentage change between 2017-19 and 2020 in patients whose first pathology sample indicating cancer was taken in the previous five weeks

Note: The 12th July occurs in week 28 during 2017-2019, but occurs in week 29 in 2020. Caution should thus be exercised in comparisons of week 28 & 29 between 2017-2019 and 2020

Patients with pathology samples indicating cancer by week first sample taken

Percentage change between 2017-19 and 2020 in patients whose first pathology sample indicating cancer was taken in the previous five weeks

Note: The 12th July occurs in week 28 during 2017-2019, but occurs in week 29 in 2020. Caution should thus be exercised in comparisons of week 28 & 29 between 2017-2019 and 2020

*Date week ended in 2020

Notes:

1. NMSC: Non-melanoma skin cancer
2. Data is sourced from the four NHS pathology laboratories in Northern Ireland (Altnagelvin, Antrim, Belfast, Craigavon), which is provided to the NI Cancer Registry on a monthly basis. It does not include information on pathology samples processed by private laboratories.
3. Figures represent the number of patients with pathology samples that indicated a malignant tumour and had this result coded and recorded by the end of October 2020. Further samples taken during Jan-Oct may not yet have been recorded as a result was not available by the end of October 2020. The presented figures may thus represent an undercount, particularly for later weeks. However, when comparisons are made with 2017-2019 the same limitation has been applied to all years in order to maintain comparability.
4. Assignment of week number is based upon a Sunday to Saturday week. The week ending label used in graphs and tables is based upon the date of the end of the week in 2020. This is compared with the equivalent Sunday-Saturday week in previous years, although the actual date ending this week in previous years will differ.
5. Individual patients with cancer may have more than one pathology sample. A diagnosis of cancer may be a result of more than one procedure indicating cancer, for example a breast cancer diagnosis may be based upon a positive biopsy of the breast and then a separate positive dissection of a lymph node. Patients are thus only included once per cancer type unless they have had pathology samples separated by more than two years, thus a patient with samples in March and April of 2019 will be counted once (in the March 2019 count), while a patient with samples in April 2017 and May 2020 will be counted in both the April 2017 and May 2020 counts.
6. "Missed" patients are calculated based upon the difference between the actual number of patients recorded compared to the number expected, which is based upon the trend in patients diagnosed pathologically from Jan 2017 to Feb 2020. It should be noted that these "missed" patients may be diagnosed clinically instead of pathologically (e.g. as a result of an emergency admission to hospital).

Acknowledgements

The Northern Ireland Cancer Registry (NICR) is funded by the Public Health Agency. NICR uses data provided by patients and collected by the health service as part of their care and support.
