Summary	3
Number of pathology samples indicating cancer - All persons	5
Number of pathology samples indicating cancer - Males	7
Number of pathology samples indicating cancer - Females	9
Number of pathology samples indicating cancer - Ages 0-69	11
Number of pathology samples indicating cancer - Ages 70 and over	13
Number of pathology samples indicating cancer - Belfast	15
Number of pathology samples indicating cancer - Altnagelvin	17
Number of pathology samples indicating cancer - Antrim	19
Number of pathology samples indicating cancer - Craigavon	21
Number of pathology samples indicating bowel cancer - All persons	23
Number of pathology samples indicating bowel cancer - All persons, screening age	25
Number of pathology samples indicating lung cancer - All persons	27
Number of pathology samples indicating breast cancer - Females	29
Number of pathology samples indicating breast cancer - Females, screening age	31
Number of pathology samples indicating prostate cancer - Males	33
Number of pathology samples indicating gynaecological cancer - Females	35
Number of pathology samples indicating upper gastrointestinal cancer - All persons	37
Number of pathology samples indicating head & neck cancer - All persons	39
Number of pathology samples indicating urinary cancer - All persons	41
Number of pathology samples indicating haematological cancer - All persons	43
Number of pathology samples indicating malignant melanoma - All persons	45
Number of pathology samples indicating non-melanoma skin cancer - All persons	47
Number of pathology samples indicating other cancer - All persons	49
Notes	51

SUMMARY

Recent trends in the number of pathology samples indicating cancer: Oct 2020

- 1) This summary provides an overview of recent trends in the number of pathology samples indicating cancer (excluding non-melanoma skin cancer, NMSC) which were taken from 1st January 2020 to the week ending 10th October 2020 in Northern Ireland.
- 2) These trends are contrasted with the annual average number of pathology samples indicating cancer (ex NMSC) during 2017-2019 in order to provide an indication of the potential impact of the Covid-19 restrictions on diagnostic cancer services.
- 3) Data are sourced from the four NHS pathology laboratories in Northern Ireland (Belfast, Altnagelvin, Antrim, Craigavon), which are usually provided to the NI Cancer Registry on a monthly basis.

Trends in number of pathology samples indicating cancer by week first sample taken

- 4) From 1st March to 12th September 2020, the number of pathological samples indicating cancer was 26% lower than the average number for the same time period in 2017-2019.

Percentage change between 2017-2019 and 2020 in the number of pathology samples indicating cancer, taken in weeks 37-41 of each year (6 September to 10 October in 2020)

5) Patient demographics

There was a 19% reduction in the number of pathology samples indicating cancer in weeks 37-41 of 2020, compared to the average value for weeks 37-41 in 2017-2019. In particular, there was a 21% decrease among males and a 17% decrease among females. A decrease of 21% occurred in the number of samples among patients aged 0-69 years, while a decrease of 15% occurred among those aged 70 and older. Reductions were greatest in Antrim (27%), but decreases were also recorded in Belfast (18%), Altnagelvin (12%) and Craigavon (20%).

6) Cancer type

Compared to the annual average for weeks 37-41 in 2017-2019, the number of pathology samples indicating lung cancer in 2020 decreased by 30%, while those indicating prostate cancer decreased by 20%. Only, the number of pathology samples indicating haematological or other cancer increased between 2017-2019 and 2020.

Number of pathology samples indicating cancer (ex NMSC): All persons

Number of pathology samples indicating cancer taken from 1 Mar 2020 to 10 Oct 2020

Number of pathology samples indicating cancer by month sample taken

Number of pathology samples indicating cancer by week sample taken

Percentage change between 2017-19 and 2020 in the number of pathology samples indicating cancer taken in the previous five weeks

Note: The 12th July occurs in week 28 during 2017-2019, but occurs in week 29 in 2020. Caution should thus be exercised in comparisons of week 28 & 29 between 2017-2019 and 2020

DATA TABLES - Trend in number of pathology samples indicating cancer

By month sample taken

Month	2017-2019 average	2020	Percentage change
Jul	623	485	-22%
Aug	660	472	-29%
Sep	712	593	-17%
Oct*	283	195	-31%

* Part only - Up to week 41

By week sample taken

Week number*	2017-2019 average	2020	Five-week rolling total		
			2017-2019 average	2020	Percentage change
Week 27 (04 Jul)	149	113			
Week 28 (11 Jul)	108	115			
Week 29 (18 Jul)	143	89			
Week 30 (25 Jul)	147	114			
Week 31 (01 Aug)	155	110	702	541	-23%
Week 32 (08 Aug)	159	101	712	529	-26%
Week 33 (15 Aug)	155	131	760	545	-28%
Week 34 (22 Aug)	147	126	764	582	-24%
Week 35 (29 Aug)	131	114	747	582	-22%
Week 36 (05 Sep)	175	93	768	565	-26%
Week 37 (12 Sep)	175	124	783	588	-25%
Week 38 (19 Sep)	176	136	804	593	-26%
Week 39 (26 Sep)	160	158	816	625	-23%
Week 40 (03 Oct)	155	132	841	643	-24%
Week 41 (10 Oct)	142	145	808	695	-14%

*Date week ended in 2020

Note: (ICD10 code: C44).

Number of pathology samples indicating other cancer: All persons

Number of pathology samples indicating cancer taken from 1 Mar 2020 to 10 Oct 2020

Number of pathology samples indicating cancer by month sample taken

Number of pathology samples indicating cancer by week sample taken

Percentage change between 2017-19 and 2020 in the number of pathology samples indicating cancer taken in the previous five weeks

Note: The 12th July occurs in week 28 during 2017-2019, but occurs in week 29 in 2020. Caution should thus be exercised in comparisons of week 28 & 29 between 2017-2019 and 2020

Trend in number of pathology samples indicating cancer by month and year sample taken

By month and year sample taken

Month/Year	Samples
Sep 2018	102
Oct 2018	110
Nov 2018	140
Dec 2018	98
Jan 2019	128
Feb 2019	114
Mar 2019	97
Apr 2019	111
May 2019	117
Jun 2019	96
Jul 2019	114
Aug 2019	98
Sep 2019	94
Oct 2019	137
Nov 2019	97
Dec 2019	87
Jan 2020	105
Feb 2020	93
Mar 2020	122
Apr 2020	58
May 2020	80
Jun 2020	106
Jul 2020	125
Aug 2020	83
Sep 2020	136

DATA TABLES - Trend in number of pathology samples indicating cancer

By month sample taken

Month	2017-2019 average	2020	Percentage change
Jul	98	125	27%
Aug	101	83	-18%
Sep	96	136	41%
Oct*	50	37	-26%

* Part only - Up to week 41

Note: Includes cancers of small intestine, anus, liver, gallbladder, thymus, bone, mesothelioma, soft tissue, penis, testis, eye, brain, endocrine system and thyroid (ICD10 codes: C16, C21-C26, C37-C41, C45-C49, C60, C62, C63, C69-C75). Excludes cancer of unknown primary.

By week sample taken

Week number*	2017-2019 average	2020	Five-week rolling total		
			2017-2019 average	2020	Percentage change
Week 27 (04 Jul)	19	37			
Week 28 (11 Jul)	19	27			
Week 29 (18 Jul)	25	13			
Week 30 (25 Jul)	26	30			
Week 31 (01 Aug)	22	34	111	141	27%
Week 32 (08 Aug)	26	21	118	125	6%
Week 33 (15 Aug)	25	18	124	116	-7%
Week 34 (22 Aug)	18	19	117	122	4%
Week 35 (29 Aug)	19	25	110	117	7%
Week 36 (05 Sep)	26	26	114	109	-4%
Week 37 (12 Sep)	26	33	114	121	6%
Week 38 (19 Sep)	23	31	112	134	20%
Week 39 (26 Sep)	21	25	115	140	22%
Week 40 (03 Oct)	25	31	121	146	21%
Week 41 (10 Oct)	25	27	120	147	22%

*Date week ended in 2020

Notes:

1. NMSC: Non-melanoma skin cancer
2. Data is sourced from the four NHS pathology laboratories in Northern Ireland (Altnagelvin, Antrim, Belfast, Craigavon), which is provided to the NI Cancer Registry on a monthly basis. It does not include information on pathology samples processed by private laboratories.
3. Figures represent the number of pathology samples taken in the given week/month which indicated a malignant tumour and had this result coded and recorded by the end of October 2020. Further samples taken during Jan-Oct may not yet have been recorded as a result was not available by the end of October 2020. The presented figures may thus represent an undercount, particularly for later weeks. However, when comparisons are made with 2017-2019 the same limitation has been applied to all years in order to maintain comparability.
4. Assignment of week number is based upon a Sunday to Saturday week. The week ending label used in graphs and tables is based upon the date of the end of the week in 2020. This is compared with the equivalent Sunday-Saturday week in previous years, although the actual date ending this week in previous years will differ.
5. Individual patients with cancer may have more than one pathology sample. A diagnosis of cancer may be a result of more than one procedure indicating cancer, for example a breast cancer diagnosis may be based upon a positive biopsy of the breast and then a separate positive dissection of a lymph node. The presented number of cancer samples does not therefore represent the number of people with pathologically diagnosed cancer, but does indicate the processing workload of Northern Ireland's NHS pathology laboratories for new cancer cases.

Acknowledgements

The Northern Ireland Cancer Registry (NICR) is funded by the Public Health Agency. NICR uses data provided by patients and collected by the health service as part of their care and support.
