

# Recent trends in the number of pathology samples indicating cancer in Northern Ireland

November 2020 Update

**Acknowledgements:** The Northern Ireland Cancer Registry (NICR) is funded by the Public Health Agency. NICR uses data provided by patients and collected by the health service as part of their care and support.

## Contents

	<u>Page</u>
Summary	3
Number of pathology samples indicating cancer - All persons	5
Number of pathology samples indicating cancer - Males	7
Number of pathology samples indicating cancer - Females	9
Number of pathology samples indicating cancer - Ages 0-69	11
Number of pathology samples indicating cancer - Ages 70 and over	13
Number of pathology samples indicating cancer - Belfast	15
Number of pathology samples indicating cancer - Altnagelvin	17
Number of pathology samples indicating cancer - Antrim	19
Number of pathology samples indicating cancer - Craigavon	21
Number of pathology samples indicating bowel cancer - All persons	23
Number of pathology samples indicating bowel cancer - All persons, screening age	25
Number of pathology samples indicating lung cancer - All persons	27
Number of pathology samples indicating breast cancer - Females	29
Number of pathology samples indicating breast cancer - Females, screening age	31
Number of pathology samples indicating prostate cancer - Males	33
Number of pathology samples indicating gynaecological cancer - Females	35
Number of pathology samples indicating upper gastrointestinal cancer - All persons	37
Number of pathology samples indicating head & neck cancer - All persons	39
Number of pathology samples indicating urinary cancer - All persons	41
Number of pathology samples indicating haematological cancer - All persons	43
Number of pathology samples indicating malignant melanoma - All persons	45
Number of pathology samples indicating non-melanoma skin cancer - All persons	47
Number of pathology samples indicating other cancer - All persons	49
Notes	51

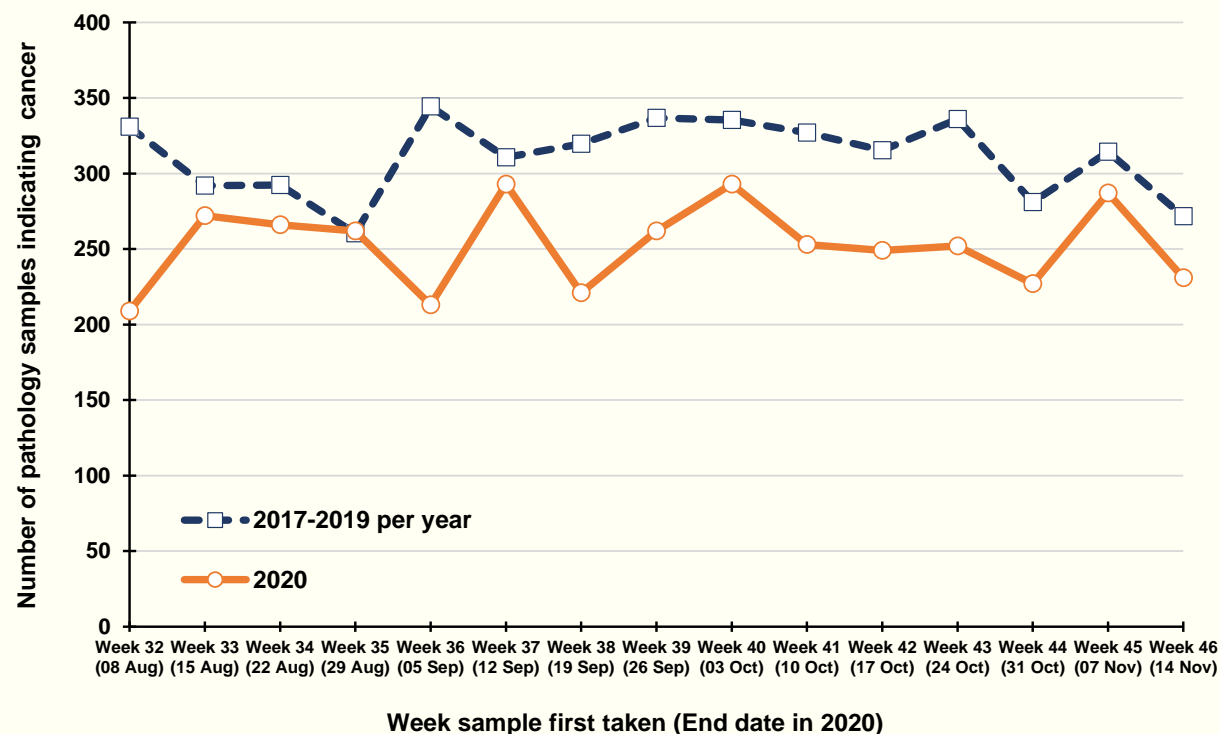

## SUMMARY

### Recent trends in the number of pathology samples indicating cancer: Nov 2020

- 1) This summary provides an overview of recent trends in the number of pathology samples indicating cancer (excluding non-melanoma skin cancer, NMSC) which were taken from 1st January 2020 to the week ending 14th November 2020 in Northern Ireland.
- 2) These trends are contrasted with the annual average number of pathology samples indicating cancer (ex NMSC) during 2017-2019 in order to provide an indication of the potential impact of the Covid-19 restrictions on diagnostic cancer services.
- 3) Data are sourced from the four NHS pathology laboratories in Northern Ireland (Belfast, Altnagelvin, Antrim, Craigavon), which are usually provided to the NI Cancer Registry on a monthly basis.

#### Trends in number of pathology samples indicating cancer by week first sample taken

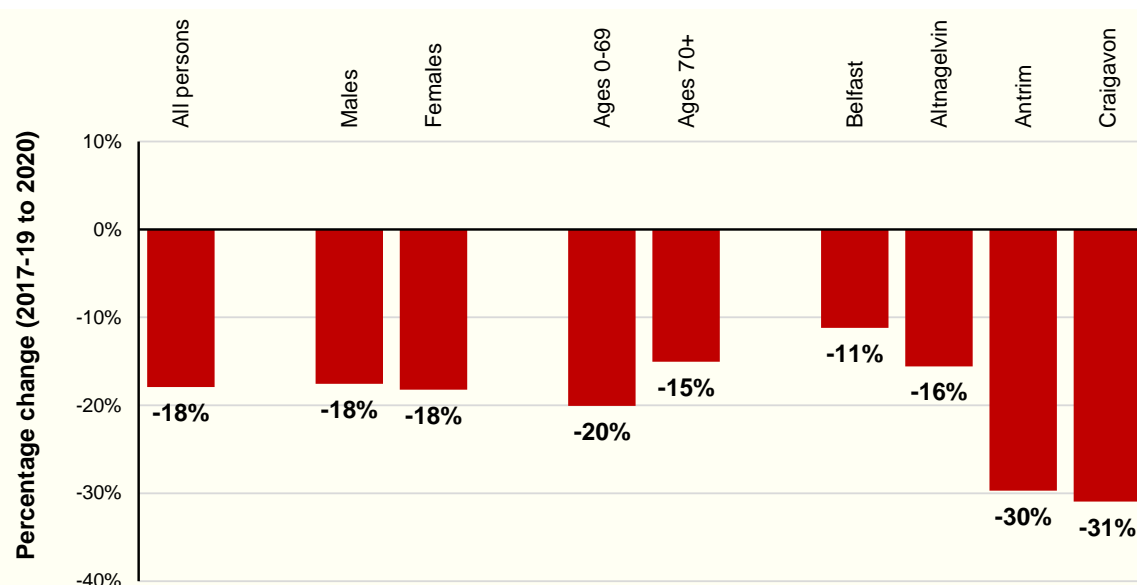

- 4) From 1st March to 14th November 2020, the number of pathological samples indicating cancer was 25% lower than the average number for the same time period in 2017-2019.

**Percentage change between 2017-2019 and 2020 in the number of pathology samples indicating cancer, taken in weeks 42-46 of each year (11 October to 14 November in 2020)**

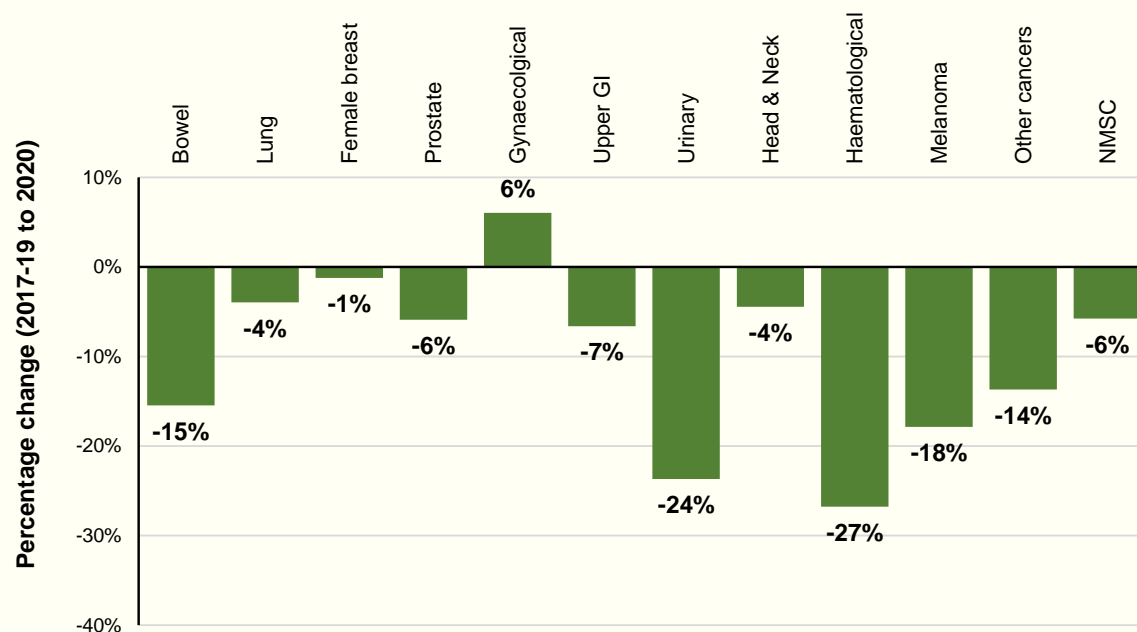

**5) Patient demographics**

There was an 18% reduction in the number of pathology samples indicating cancer in weeks 42-46 of 2020, compared to the average value for weeks 42-46 in 2017-2019. In particular, there was an 18% decrease among males and females. A decrease of 20% occurred in the number of samples among patients aged 0-69 years, while a decrease of 15% occurred among those aged 70 and older. Reductions were greatest in Antrim (30%) and Craigavon (31%), but decreases were also recorded in Belfast (11%) and Altnagelvin (16%).

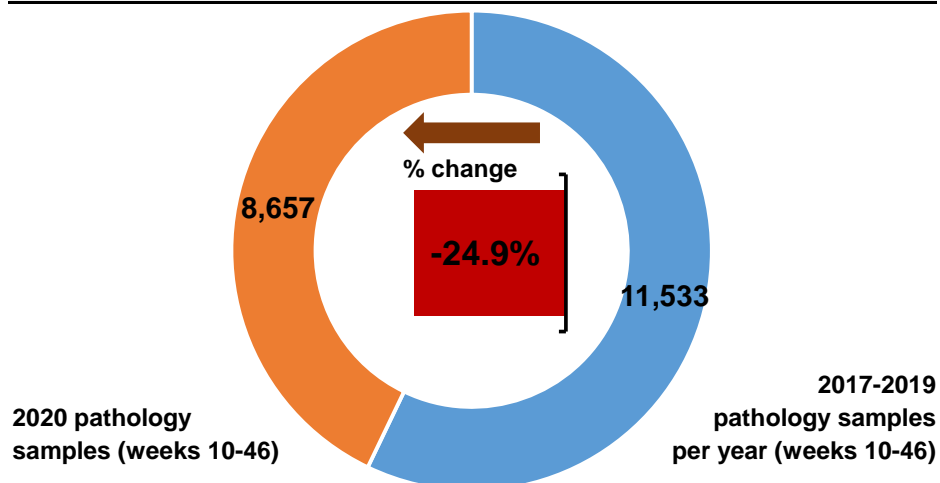

**6) Cancer type**

Compared to the annual average for weeks 42-46 in 2017-2019, the number of pathology samples indicating bowel cancer in 2020 decreased by 15%, while those indicating prostate cancer decreased by 6%. Reductions were greatest for haematological and urinary cancers. Only, the number of pathology samples indicating gynaecological cancer increased between 2017-2019 and 2020.

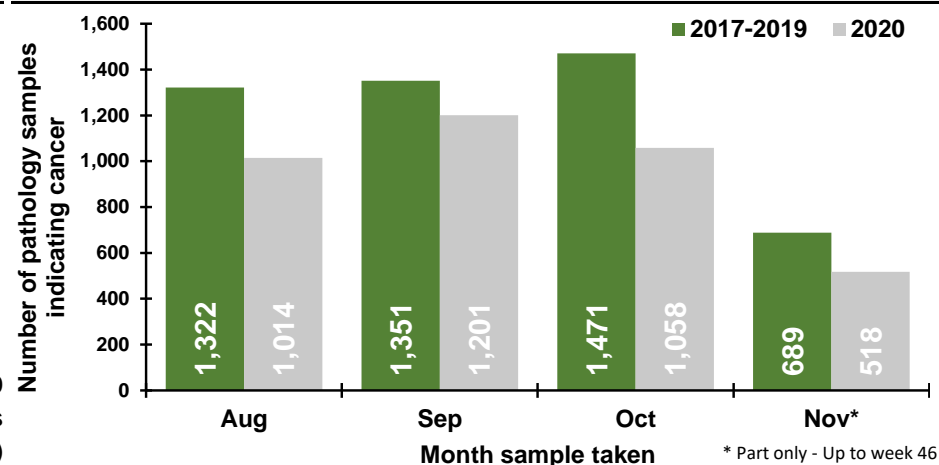

## Number of pathology samples indicating cancer (ex NMSC): All persons

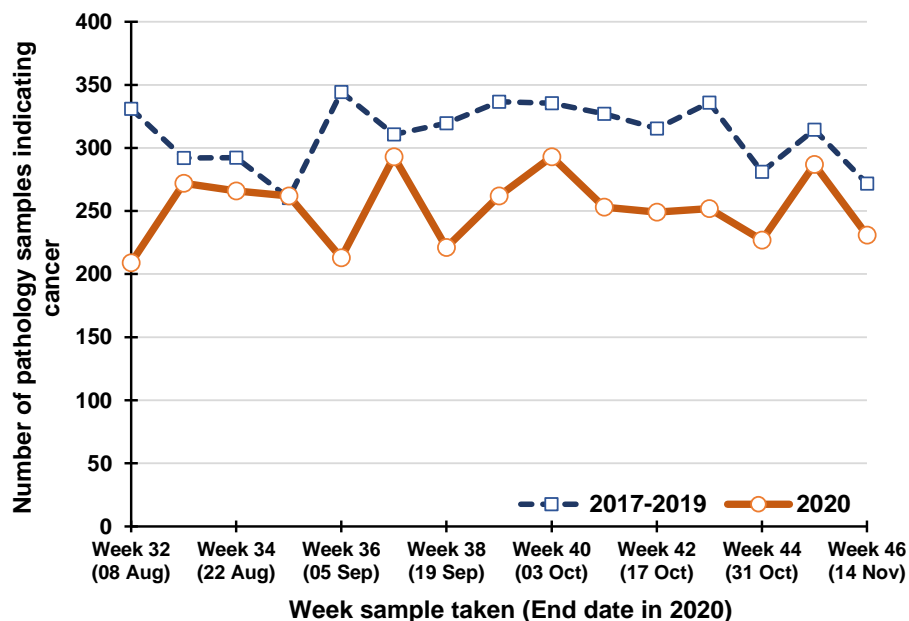

Number of pathology samples indicating cancer taken from 1 Mar 2020 to 14 Nov 2020

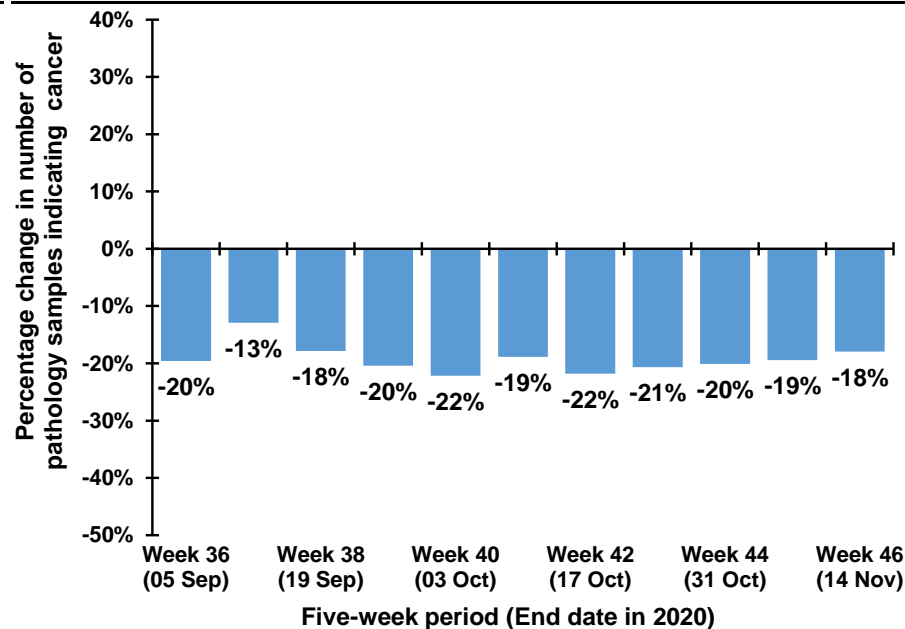

Number of pathology samples indicating cancer by month sample taken

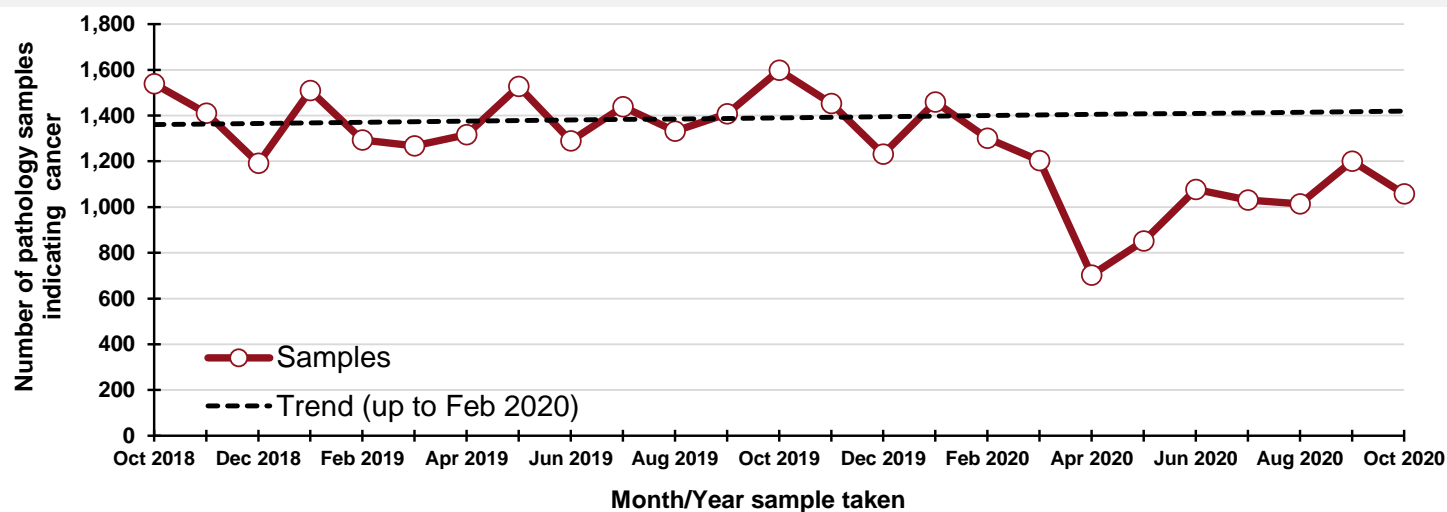

Number of pathology samples indicating cancer by week sample taken

Percentage change between 2017-19 and 2020 in the number of pathology samples indicating cancer taken in the previous five weeks

### Trend in number of pathology samples indicating cancer by month and year sample taken

### By month and year sample taken

Month/Year	Samples
Oct 2018	1,539

Week 32 (08 Aug)	26	21			
Week 33 (15 Aug)	25	18			
Week 34 (22 Aug)	18	19			
Week 35 (29 Aug)	19	25			
Week 36 (05 Sep)	26	26	114	109	-5%
Week 37 (12 Sep)	26	33	115	121	6%
Week 38 (19 Sep)	23	31	113	134	19%
Week 39 (26 Sep)	22	32	116	147	26%
Week 40 (03 Oct)	26	33	124	155	25%
Week 41 (10 Oct)	27	31	124	160	29%
Week 42 (17 Oct)	24	26	122	153	26%
Week 43 (24 Oct)	28	24	126	146	16%
Week 44 (31 Oct)	21	22	125	136	9%
Week 45 (07 Nov)	24	22	123	125	1%
Week 46 (14 Nov)	23	9	119	103	-14%

\*Date week ended in 2020

## Notes:

1. NMSC: Non-melanoma skin cancer
2. Data is sourced from the four NHS pathology laboratories in Northern Ireland (Altnagelvin, Antrim, Belfast, Craigavon), which is provided to the NI Cancer Registry on a monthly basis. It does not include information on pathology samples processed by private laboratories.
3. Figures represent the number of pathology samples taken in the given week/month which indicated a malignant tumour and had this result coded and recorded by the end of November 2020. Further samples taken during Jan-Nov may not yet have been recorded as a result was not available by the end of November 2020. The presented figures may thus represent an undercount, particularly for later weeks. However, when comparisons are made with 2017-2019 the same limitation has been applied to all years in order to maintain comparability.
4. Assignment of week number is based upon a Sunday to Saturday week. The week ending label used in graphs and tables is based upon the date of the end of the week in 2020. This is compared with the equivalent Sunday-Saturday week in previous years, although the actual date ending this week in previous years will differ.
5. Individual patients with cancer may have more than one pathology sample. A diagnosis of cancer may be a result of more than one procedure indicating cancer, for example a breast cancer diagnosis may be based upon a positive biopsy of the breast and then a separate positive dissection of a lymph node. The presented number of cancer samples does not therefore represent the number of people with pathologically diagnosed cancer, but does indicate the processing workload of Northern Ireland's NHS pathology laboratories for new cancer cases.

## Acknowledgements

The Northern Ireland Cancer Registry (NICR) is funded by the Public Health Agency. NICR uses data provided by patients and collected by the health service as part of their care and support.
