SUMMARY

Recent trends in the number of pathology samples indicating cancer: Sep-21

- 1) This summary provides an overview of recent trends in the number of pathology samples indicating cancer (excluding non-melanoma skin cancer, NMSC) whose first sample was taken from Jan-20 to Sep-21 in Northern Ireland.
- 2) These trends are contrasted with the annual average number of pathology samples indicating cancer (ex NMSC) during 2017-2019 in order to provide an indication of the potential impact of the Covid-19 restrictions on diagnostic cancer services.
- 3) Data are sourced from three of the four NHS pathology laboratories in NI (Belfast, Antrim, Craigavon), which are usually provided to NICR on a monthly basis. **Altnagelvin laboratory is excluded as a change in recording systems led to an undercount in the number of reported samples in Jan-Apr 2021.**

Trends in number of pathology samples indicating cancer by month and year first sample taken

- 4) From Mar-20 to Sep-21 the number of pathological samples indicating cancer was 6.2% lower than the average number for the same time period in 2017-2019.

Notes:

1. NMSC: Non-melanoma skin cancer

2. Data is sourced from three of the four NHS pathology laboratories in Northern Ireland (Antrim, Belfast, Craigavon), which is provided to the NI Cancer Registry on a monthly basis. It does not include information on pathology samples processed by private laboratories.

3. Figures represent the number of pathology samples that indicated a malignant tumour and had this result coded and recorded by the end of Sep-21. Due to potential reporting delays, pathology data from the month following Sep-21 are used in compiling the presented results.

4. Assignment of week number is based upon a Sunday to Saturday week. The week ending label used in graphs and tables is based upon the date of the end of the week (a Saturday) in 2020/2021. This is compared with the equivalent Sunday-Saturday week in 2017-2019, although the actual date ending this week in 2017-2019 will differ.

5. Cancer types are defined as follows:

Bowel cancer: Includes colon, rectum and rectosigmoid junction (ICD10 codes: C18-C20)

Lung cancer: Includes lung and trachea (ICD10 codes: C33-C34)
