## SUMMARY

### Recent trends in the number of pathology samples indicating cancer: January 2022

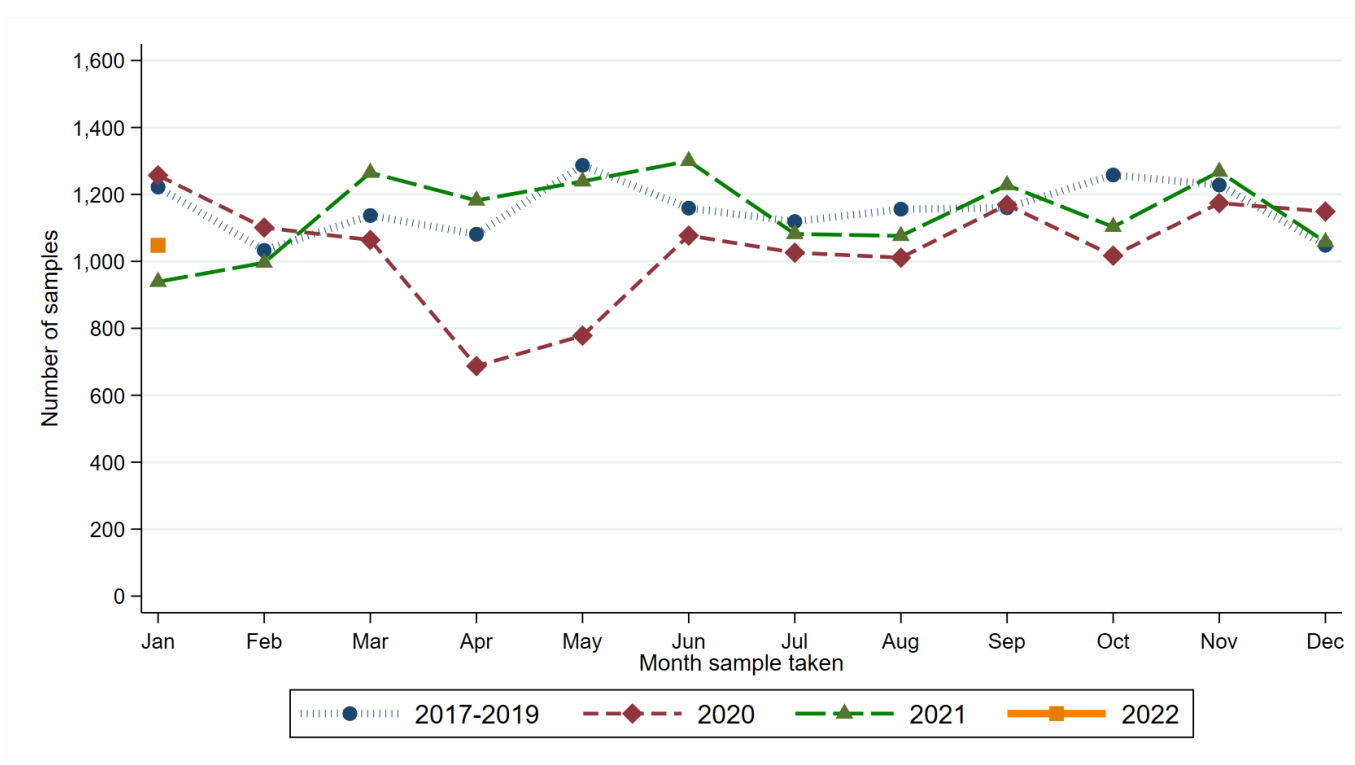

This summary provides an overview of recent trends in the number of pathology samples indicating cancer (excluding non-melanoma skin cancer, NMSC) taken from January 2020 to January 2022 in Northern Ireland.

These trends are contrasted with the annual average number of pathology samples indicating cancer (ex NMSC) during 2017-2019 in order to provide an indication of the potential impact of the Covid-19 restrictions on diagnostic cancer services.

Data are sourced from three of the four NHS pathology laboratories in NI (Belfast, Antrim, Craigavon), which are usually provided to NICR on a monthly basis. **Altnagelvin laboratory is excluded as a change in recording systems led to an undercount in the number of reported samples in Jan-Apr 2021.**

#### CHANGE IN NUMBER OF SAMPLES SINCE MARCH 2020

From March 2020 to January 2022 the number of pathological samples indicating cancer (ex NMSC) was 6.8% lower than the average number for the same time period in 2017-2019.

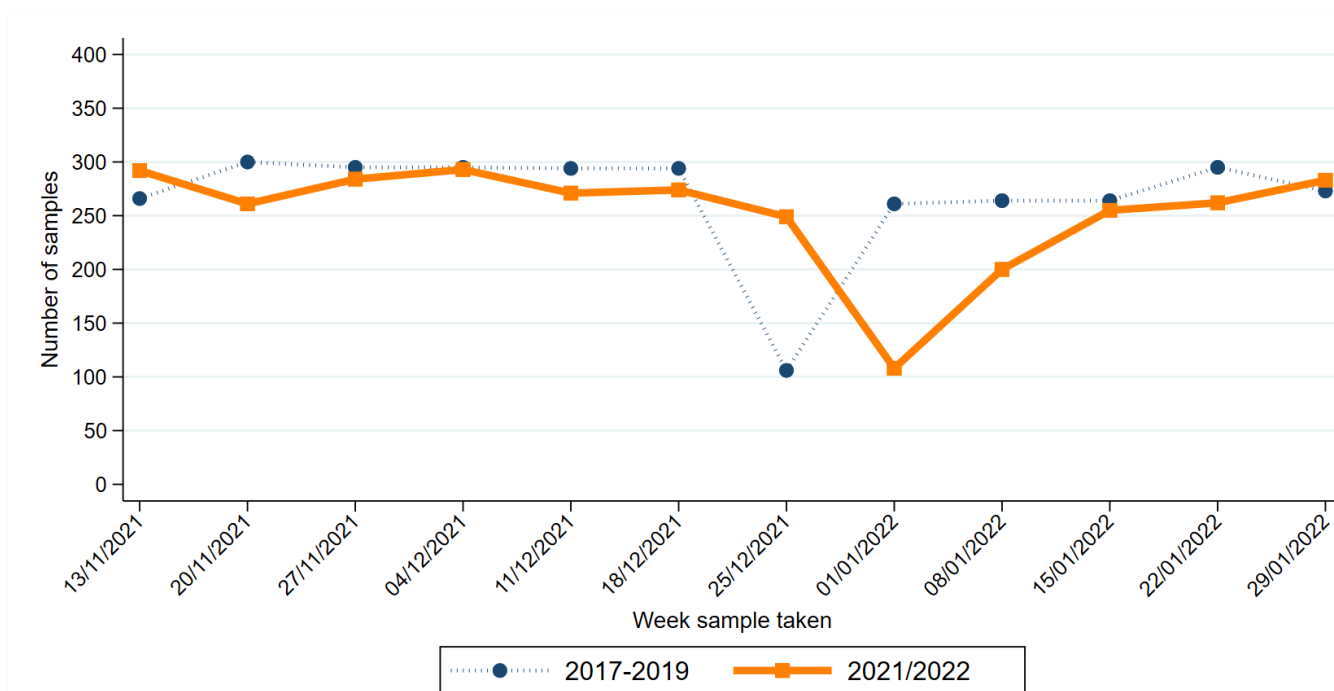

From March 2020 to January 2022 there was a 5.9% decrease in the number of samples among males and a 7.3% decrease among females compared to the same time period in 2017-2019. A decrease of 7.0% occurred in the number of samples among those aged 0-69 years, while there was a decrease of 6.5% in the number of samples among those aged 70 and older.

Compared to the annual average in 2017-2019, from March 2020 to January 2022 the number of pathology samples indicating lung cancer decreased by 26.1%. No cancer types had an increase in the number of samples between the two periods, while decreases of more than 10% were recorded for gynaecological cancer, head and neck cancer, melanoma and non-melanoma skin cancer.

### RECENT CHANGES IN THE NUMBER OF SAMPLES

There was a 5.5% decrease in the number of pathology samples indicating cancer in the twelve weeks up to 29/01/2022 compared to the average value in the equivalent weeks in 2017-2019.

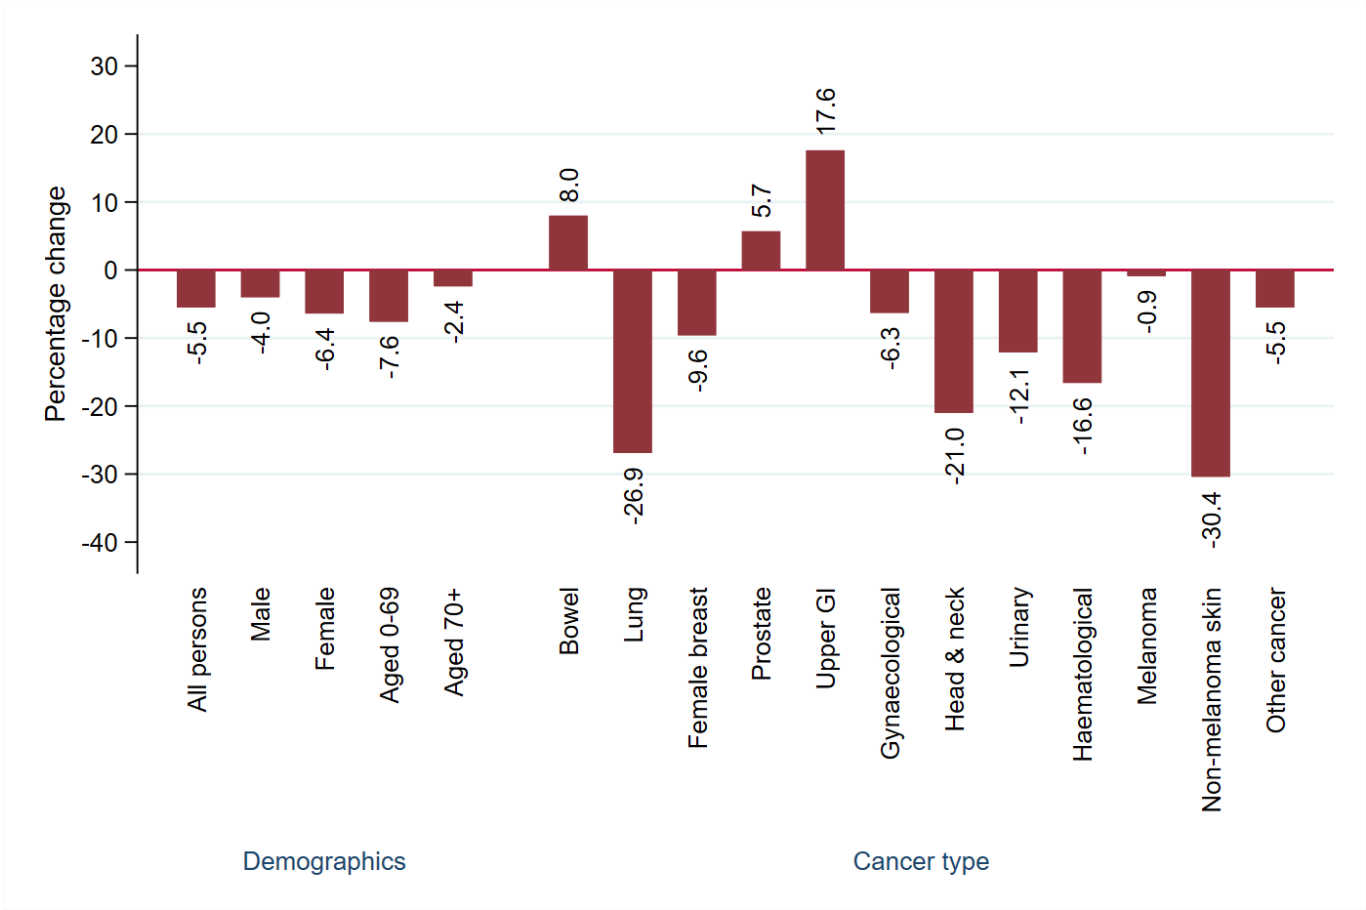

Note: Date shown refers to the end date of the week in 2021-2022. Data for previous years refers to the equivalent Sat-Sun week in those years

In the twelve weeks up to 29/01/2022 there was a 4.0% decrease in the number of samples among males and a 6.4% decrease among females compared to the same time period in 2017-2019. A decrease of 7.6% occurred in

the number of samples among those aged 0-69 years, while there was a decrease of 2.4% in the number of samples among those aged 70 and older.

Compared to the annual average in 2017-2019, in the twelve weeks up to January 2022 the number of pathology samples indicating lung cancer decreased by 26.9%. Increases were recorded for bowel cancer, prostate cancer and upper gastrointestinal cancer, while decreases of more than 10% were recorded for head and neck cancer, urinary cancer, haematological cancer and non-melanoma skin cancer.

15/01/2022	23	26
22/01/2022	30	26
29/01/2022	22	25

\* Average samples per year rounded to the nearest integer.

\*\* Date shown refers to the end date of the week in 2021-2022. Data for previous years refers to the equivalent Sat-Sun week in those years.

1. NMSC: Non-melanoma skin cancer
2. Data is sourced from three of the four NHS pathology laboratories in Northern Ireland (Antrim, Belfast, Craigavon), which is provided to the NI Cancer Registry on a monthly basis. It does not include information on pathology samples processed by private laboratories.
3. Figures represent the number of pathology samples that indicated a malignant tumour and had this result coded and recorded by the end of January 2022. Due to potential reporting delays, pathology data from the month following January 2022 are used in compiling the presented results.
4. Assignment of week number is based upon a Sunday to Saturday week. The week ending label used in graphs and tables is based upon the date of the end of the week (a Saturday) in 2021-2022. This is compared with the equivalent Sunday-Saturday week in 2017-2019, although the actual date ending this week in 2017-2019 will differ.
5. Cancer types are defined as follows:
  - Bowel cancer:** Includes colon, rectum and rectosigmoid junction (ICD10 codes: C18-C20).
  - Lung cancer:** Includes lung and trachea (ICD10 codes: C33-C34).
  - Breast cancer:** Includes female breast only (ICD10 codes: C50).
  - Prostate cancer:** (ICD10 codes: C61).
  - Gynaecological cancer:** Includes uterus, ovary, cervix, vulva, vagina, placenta and other female genital (ICD10 codes: C51-C58).
  - Upper GI cancer:** Includes oesophagus and stomach (ICD10 codes: C15, C16).
  - Head and neck cancer:** Includes lip, tongue, mouth, parotid & salivary glands, tonsil, oropharynx, nasopharynx, pyriform sinus, hypopharynx, nasal cavity, middle ear, sinuses and larynx (ICD10 codes: C00-C14, C30-C32).
  - Urinary cancer:** Includes kidney, renal pelvis, ureter, bladder and other urinary (ICD10 codes: C64-C68).
  - Haematological cancer:** Includes lymphoma (all types), leukaemia (all types), myeloma, malignant immunoproliferative disease and other lymphoid and haematopoietic (ICD10 codes: C81-C96).
  - Melanoma:** (ICD10 code: C43).
  - Non-melanoma skin cancer (NMSC):** (ICD10 code: C44).
  - Other cancer:** Includes cancers of small intestine, anus, liver, gallbladder, thymus, bone, mesothelioma, soft tissue, penis, testis, eye, brain, endocrine system and thyroid (ICD10 codes: C16, C21-C26, C37-C41, C45-C49, C60, C62, C63, C69-C75). Excludes cancer of unknown primary.
