Summary	3
Patients with pathology samples indicating cancer (ex NMSC) - All persons	4
Patients with pathology samples indicating cancer (ex NMSC) - Males	6
Patients with pathology samples indicating cancer (ex NMSC) - Females	8
Patients with pathology samples indicating cancer (ex NMSC) - Ages 0-69	10
Patients with pathology samples indicating cancer (ex NMSC) - Ages 70 and over	12
Patients with pathology samples indicating cancer (ex NMSC) - Histology	14
Patients with pathology samples indicating cancer (ex NMSC) - Cytology	16
Patients with pathology samples indicating cancer (ex NMSC) - Belfast	18
Patients with pathology samples indicating cancer (ex NMSC) - Altnagelvin	20
Patients with pathology samples indicating cancer (ex NMSC) - Antrim	22
Patients with pathology samples indicating cancer (ex NMSC) - Craigavon	24
Patients with pathology samples indicating bowel cancer - All persons	26
Patients with pathology samples indicating bowel cancer - All persons, screening age	28
Patients with pathology samples indicating lung cancer - All persons	30
Patients with pathology samples indicating breast cancer - Females	32
Patients with pathology samples indicating breast cancer - Females, screening age	34
Patients with pathology samples indicating prostate cancer - Males	36
Patients with pathology samples indicating gynaecological cancer - Females	38
Patients with pathology samples indicating upper gastrointestinal cancer - All persons	40
Patients with pathology samples indicating urinary cancer - All persons	42
Patients with pathology samples indicating haematological cancer - All persons	44
Patients with pathology samples indicating malignant melanoma - All persons	46
Patients with pathology samples indicating non-melanoma skin cancer - All persons	48
Notes	50

## Summary

This summary provides an overview of recent trends in the number of patients with pathology samples indicating cancer (excluding non-melanoma skin cancer, NMSC) whose first sample was taken from 1st January 2020 to the week ending 16th May 2020 in Northern Ireland. These trends are contrasted with the annual average number of patients with pathology samples indicating cancer (ex NMSC) during 2017-2019 in order to provide an indication of the potential impact of the Covid-19 lockdown on diagnostic cancer services. Data are sourced from the four NHS pathology laboratories in Northern Ireland (Belfast, Altnagelvin, Antrim, Craigavon), which are usually provided to the NI Cancer Registry on a monthly basis.

### Trends in patients with pathology samples indicating cancer (ex NMSC) by week first sample taken

### Percentage change in patients between 2017-2019 and 2020 with pathology samples indicating cancer (ex NMSC) first taken in weeks 16-20 of each year (12 Apr - 16 May in 2020)

Compared to the annual average in 2017-2019 the number of patients with first pathology samples indicating cancer for the same time period in 2020 fell 41% overall, with a 32% decrease among males and a 49% decrease among females. The decrease was 39% among patients aged 0-69 years and 43% among those aged 70 and older. Reductions were greater in Craigavon (63%), Altnagelvin (39%) and Antrim (53%) laboratories than in Belfast (32%). The number of patients with their first pathology sample indicating lung cancer fell by 46%, prostate cancer by 22%, bowel cancer by 54% and breast cancer by 56%.

# Patients with pathology samples indicating cancer (ex NMSC): All persons

Patients with pathology samples indicating cancer, with first sample taken from 1 Mar 2020 to 16 May 2020

Patients with pathology samples indicating cancer by month first sample taken

Patients with pathology samples indicating cancer by week first sample taken

Percentage change between 2017-19 and 2020 in patients whose first pathology sample indicating cancer was taken in the previous five weeks

## Trend in patients with pathology samples indicating cancer by month and year first sample taken

### By month and year first sample taken

Week 12 (21 Mar)	79	52	449	421	-6.2%
Week 13 (28 Mar)	85	47	431	386	-10.4%
Week 14 (04 Apr)	87	18	429	307	-28.5%
Week 15 (11 Apr)	101	15	440	228	-48.2%
Week 16 (18 Apr)	73	10	425	142	-66.6%
Week 17 (25 Apr)	72	23	419	113	-73.0%
Week 18 (02 May)	94	15	428	81	-81.1%
Week 19 (09 May)	75	31	416	94	-77.4%
Week 20 (16 May)	79	34	394	113	-71.3%

\*Date week ended in 2020

## Notes:

1. NMSC: Non-melanoma skin cancer
2. Data is sourced from the four NHS pathology laboratories in Northern Ireland (Altnagelvin, Antrim, Belfast, Craigavon), which is provided to the NI Cancer Registry on a monthly basis. It does not include information on pathology samples processed by private laboratories.
3. Figures represent the number of patients with pathology samples that indicated a malignant tumour and had this result coded and recorded by the end of May 2020. Further samples taken during Jan-May may not yet have been recorded as a result was not available by the end of May 2020. The presented figures may thus represent an undercount, particularly for later weeks. However, when comparisons are made with 2017-2019 the same limitation has been applied to all years in order to maintain comparability.
4. Assignment of week number is based upon a Sunday to Saturday week. The week ending label used in graphs and tables is based upon the date of the end of the week in 2020. This is compared with the equivalent Sunday-Saturday week in previous years, although the actual date ending this week in previous years will differ.
5. Individual patients with cancer may have more than one pathology sample. A diagnosis of cancer may be a result of more than one procedure indicating cancer. For example a breast cancer diagnosis may be based upon a positive biopsy of the breast and then a separate positive dissection of a lymph node. In the event that a patient has had more than one pathology sample the date of the first sample taken, measured from the beginning of 2016 onwards, is used. Thus patients whose first sample was in 2016, but had further biopsies in 2017 onwards are not included in this analysis. In addition, patient numbers include those patients with a first ever diagnosis of cancer, patients with new cancers who have had a previous, different cancer diagnosed prior to 2016, and patients with a recurrence of a cancer that was originally diagnosed prior to 2016.
6. To preserve patient confidentiality tables cells with 1-4 are replaced with an average value of 2.5.

## Acknowledgements

The Northern Ireland Cancer Registry (NICR) is funded by the Public Health Agency. NICR uses data provided by patients and collected by the health service as part of their care and support.
