### **South Belfast GP Federation**

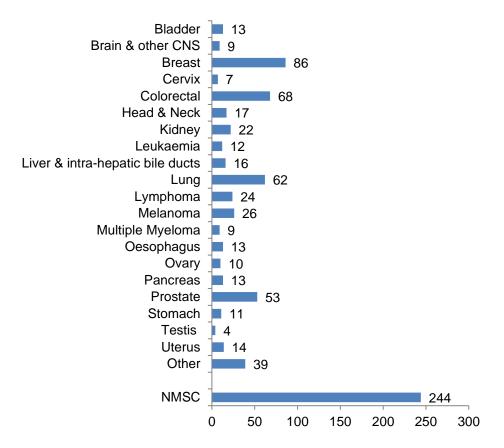

This factsheet presents information on cancer incidence and prevalence in the South Belfast GP Federation to provide those working with cancer some idea of the number of people diagnosed each year, the ages of these people, the type of cancer they have had and how many people are living with and beyond a cancer diagnosis between 1993-2015. It forms part of a larger report produced as part of the Macmillan-NICR partnership to describe the cancer profiles of the 17 GP Federations in Northern Ireland (NI). The full report can be accessed at <a href="http://www.qub.ac.uk/research-centres/nicr/">http://www.qub.ac.uk/research-centres/nicr/</a>. The data are reported based on GP federation of care rather than GP federation of residence i.e. people registered at GP practices in the South Belfast GP Federation area and not based on their home address. Also were data are presented for 'All cancers' this excludes non-melanoma skin cancer.

### Table 1.Summary statistics for all cancers (excluding non-melanoma skin cancer in South Belfast GP Federation area

	Males	Females	Both Sexes
Average cases diagnosed per year (2011-2015) 10 year prevalence 23 year prevalence	251.4 1,052 1,468	276.8 1,341 2,074	528.2 2,393 3,542
Incidence			

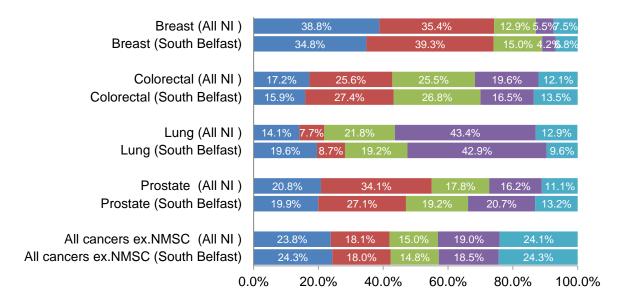

• There were on average 528 cases diagnosed and 214 deaths each year from all cancers excluding non-melanoma skin cancer (NMSC; C00-C97 ex.C44).

# Figure 1. Average number of cases of specific cancers diagnosed each year between 2011-2015 in people registered in South Belfast GP Federation area

 In 2011-2015 there were on average 86 cases of invasive female breast cancer, 53 cases of prostate cancer, 68 cases of colorectal cancer, 62 cases of Lung cancer and 244 cases of non-melanoma skin cancer diagnosed each year.

■ 0 to 49 years ■ 50 to 59 years ■ 0 to 59 years (prostate only) ■ 60 to 69 years ■ 70 years and over

The 23- year prevalence represents all people diagnosed with cancer during 1993-2015 who are still alive at the end of 2015. Other prevalence measures commonly used, which depend on the diagnosis period considered, include:

- One year prevalence (people diagnosed in 2015) which at the end of 2015 was 360 (170 males and 190 females).
- Five year prevalence (people diagnosed 2011-2015) which at the end of 2015 was 1,441 (646 males and 795 females).
- Ten year prevalence (people diagnosed 2006-2015) which at the end of 2015 was 2,393 (1,052 males and 1,341 females).
- Twenty-three year prevalence (people diagnosed 1993-2015) which at the end of 2015 was 3,542 (1,468 males and 2,074 females).

Figure 5. 23 year prevalence (based on time since diagnosis) for all cancers (excluding NMSC) by sex in South Belfast GP Federation area

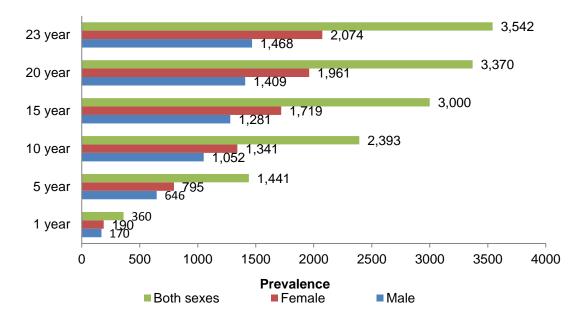

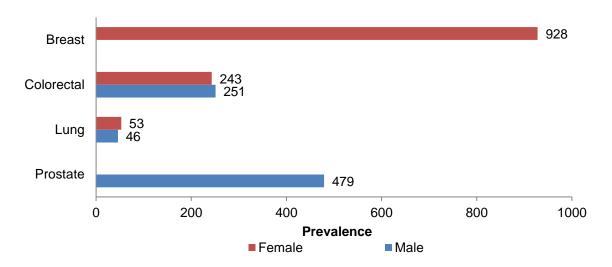

Figure 6. 23-year prevalence (number of people) for all cancers (excluding NMSC) by sex and cancer site in South Belfast GP Federation area

At 31<sup>st</sup> December 2015, of those people living up to 23 years after a cancer diagnosis (excluding non-melanoma skin cancer) in the South Belfast GP Federation:

- Over half (56.4%) of people who were living with a cancer diagnosis had been diagnosed with breast, prostate, colorectal or lung cancer.
- 2,074 were female and of these over 4 in 10 females (44.7%) had, had a diagnosis of invasive breast cancer (ICD10 C50).
- 1,468 were male and of these 3 in 10 males (32.6%) had, had a diagnosis of prostate cancer (ICD10 C61).

■5+years

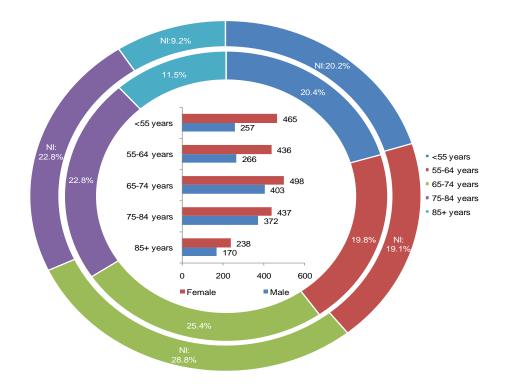

Proportion (%) of people with cancer

0-1 years	1-5 years

At 31<sup>st</sup> December 2015, of those people living up to 23 years after a cancer diagnosis (excluding non-melanoma skin cancer) in the South Belfast GP Federation:

- Almost two thirds of women diagnosed with female breast cancer(62.2%) and melanoma (61.6%) were diagnosed more than five years previously.
- Almost two thirds (63.7%) of people diagnosed with lung cancer were diagnosed within the last five years.

Figure 8. 23- year prevalence of all cancers (excluding NMSC) by age at end 2015 in South Belfast GP Federation area

 8 out of 10 (79.6%) people diagnosed between 1993-2015 and alive at end of 2015 were aged 55 years or over at 31<sup>st</sup> December 2015 with one in five (22.8%) people aged between 75 and 85 years.
