

PGR Studentship Information Template 2019 entry

- Please complete the template with as much information as possible.
- *fields are essential.
- If you have information that does not have a label, please create a new row in the table for it.

*Title of studentship	SMART Nanocarriers for Cancer
Value / what is covered?	Fully funded 100% of UK/EU tuition fees paid and an annual stipend for UK residents only (living expenses), currently at £14,777
Awarding body	DfE
Number of studentships	1
*Summary descriptive text / Example of research project	<p>An important limitation in the treatment of cancer with chemotherapeutics is the inability to achieve therapeutically effective local drug concentrations avoiding healthy tissue damage. Liposomes are phospholipid-based delivery systems, clinically used for the transport of chemotherapeutics. The clinical use of phospholipid-based delivery systems is based on reduced toxicity to healthy tissues with a simultaneous increase in tumour accumulation. However, the accumulation of drug-loaded liposomes in the tumour tissue does not necessarily lead to a higher drug bioavailability.</p> <p>This project focuses on designing smart (stimuli-responsive) nanosystems for on-demand drug release for anti-cancer drug delivery. The scientific approach of this project is to fabricate new types of responsive drug delivery systems (e.g. temperature and hypoxia). The developed smart nanoparticles will be characterised, and their biological activity <i>in vitro</i> and <i>in vivo</i> will be evaluated. This highly interdisciplinary project combines expertise in formulation and biological testing and will provide a unique opportunity for excellent students to work in a stimulating multidisciplinary team.</p>
*Supervisor(s)	Dr Wafa Al-Jamal & Dr Raghu Raj Singh Thakur
*Eligibility / residence Status	UK/EU only
Country	Northern Ireland
*Start date and duration	1 January 2020 Funding covers a three-year full-time PhD.
*Faculty	MHLS

*Research centre / School	Pharmacy
Subject area	Smart nanoparticles, cancer nanomedicine, and targeted drug delivery
Candidate requirements / Key skills required for the post	<p>Applicants should have a 1st or 2.1 honours degree (or equivalent) in a relevant subject. Relevant subjects include Pharmacy, Pharmaceutical Sciences, Biochemistry, Biological/Biomedical Sciences, Chemistry, Engineering, or a closely related discipline. Students who have a 2.2 honours degree and a Master's degree may also be considered, but the School reserves the right to shortlist for interview only those applicants who have demonstrated high academic attainment to date.</p> <p>For DfE studentship eligibility, please check the link below. https://www.nidirect.gov.uk/articles/department-economy-studentships</p>
*Deadline for applications	15 th November 2019
*How to apply / contacts	<p>Postgraduate Research applicants for Pharmacy who are interested in applying for a fully funded DfE studentship must have applied to Queen's, via the Direct Applications Portal, and submitted all required supporting documents by the closing date, which will be announced later in the Academic year.</p> <p>https://dap.qub.ac.uk/portal/user/u_login.php</p>

Keywords for search filters	Responsive nanoparticles, targeted drug delivery, cancer nanomedicine.
Training provided through the research project	<p>This highly interdisciplinary project combines expertise in responsive materials, nanomedicine formulation, and drug delivery. It will provide a unique opportunity for excellent students to work in a stimulating multidisciplinary team. The candidate will be working on designing novel responsive nanocarriers that will be characterised using a range of spectroscopic techniques. The project will also involve evaluating the nanoparticles' activity in relevant <i>in vitro</i> and <i>in vivo</i> models. The successful candidate will be a highly motivated, hard-working graduate with excellent communication and organizational skills.</p>
Expected impact activities	This research aims to develop new smart nanocarriers suitable for anticancer drug delivery.
