

QUEEN'S UNIVERSITY BELFAST

*Title of studentship	To investigate the pharmacological response of senolytics in ovarian cancer.
Value / what is covered?	
Awarding body	
Number of studentships	1
*Summary descriptive text / Example of research project	<p>Chemotherapy causes cancer cells to become senescent which is associated with increased resistance to standard-of-care cancer therapies. Senescent cells stop dividing but remain metabolically active. Moreover, senescent cancer cells secrete mediators that increase inflammation and modulate tumour microenvironment cells. Chemotherapy also causes senescence in normal cells of patients receiving these therapies. This affects the immune responses of these patients and creates metastatic niches that can promote cancer progression. Senolytics are a new class of drugs that kill/remove senescent cells but their application in the treatment of cancer is unknown. This PhD will evaluate the pharmacology of treating cancer senescent cells with senolytics while also elucidating the underlying tumour characteristics associated with a good/poor response to these drugs.</p> <p>In this PhD, we will employ routine cell and molecular biology techniques to study senolytic drug responses in cancer cell models. You will gain experience in RNAi and protein over-expression techniques, the study of intracellular signalling and a variety of <i>in vitro</i> assays to measure key hallmarks of tumorigenesis and drug responses in cancer cells and tumour microenvironment immune cells. Novel results will be tested in <i>in vivo</i> models and/or clinically relevant samples.</p>
*Supervisor(s)	Dr Fiona Furlong School of Pharmacy
*Eligibility / residence Status	UK/EU/International
Country	Northern Ireland
*Start date and duration	October 2020
*Faculty	MHLS
*Research centre / School	Pharmacy
Subject area	Cancer pharmacology, personalised medicine, ovarian cancer

Candidate requirements / Key skills required for the post	Applicants should have a 1st or 2.1 honours degree (or equivalent) in a relevant subject. Relevant subjects include Pharmacy, Pharmacology, Molecular Biology, Pharmaceutical Sciences, Biochemistry, Biological/Biomedical Sciences, or a closely related discipline. Students who have a 2.2 honours degree and a Master's degree may also be considered, but the School reserves the right to shortlist for interview only those applicants who have demonstrated high academic attainment to date
*Deadline for applications	January 2020
*How to apply / contacts	Postgraduate Research applicants for Pharmacy who are interested in applying for a fully funded DFE studentship must have applied to Queen's, via the Direct Applications Portal, and submitted all required supporting documents by the closing date, which will be announced later in the Academic year. https://dap.qub.ac.uk/portal/user/u_login.php
Relevant links / more information	http://www.qub.ac.uk/schools/SchoolofPharmacy/Research/PostgraduatePositions/ http://www.qub.ac.uk/schools/SchoolofPharmacy/Research/
Keywords for search filters	Cancer; cell biology; cell signalling; pharmacology; drug action;
Training provided through the research project	The project will provide hands-on training for the student in the following: <ul style="list-style-type: none"> • Cancer cell culture/co-cultures • Real time monitoring of cell proliferation • Real time monitoring of cell migration • Assays to measure cell viability and apoptosis • Protein, RNA and DNA isolation methods • a thorough understanding of cancer biology • Novel techniques of gene silencing and gene knock out • Protein over-expression techniques • Protein detection methods Working as a PhD will also provide the following training: <ul style="list-style-type: none"> • Oral and poster presentation skills • Working as part of a team • Project management: Planning and organising experiments, time management • Team work • statistical analysis
Expected impact activities	This research aims to develop strategies to develop a stratification biomarker for the use of senolytic therapy in the treatment of ovarian cancer.
